******Wanted!******

(Posted 10/19/2025)

I need a **working tube tester**. I can pay a reasonable price for it or trade for radios and electronic equipment. I am the owner of the radio room at the "Antique Mall At Cashmere" called OHM. I have vintage radios, antique radios and other electronic equipment you might be interested in. I can get photos or If you visit the booth and see something you please like contact me at kb7rvv@gmail.com. We can arrange a trade. Thank you.

I have the following radio gear. My wife says it's time for it to go. I'm willing to sell it for a very good price or even donate it to a good cause. Any amount will be substantially cheaper than the ensuing divorce.

I've figured out that I don't have time and energy for HF. I'm selling my IC 7300. I bought it new a few months ago. It has sat unused for too long. I've spent less than 10 hours on it trying to get RX programmed. I have never transmitted on it.

Price: \$850

My Rohn 45 tower is on the ground ready to go. Asking \$3100 for all 8 items as a package.

1. 8 Straight sections. One section has a rotor plate mounted about 5 ft down from top.
2. 1 tapered top section.
3. 1 flat top plate with noisy bearing.
4. 3 100 ft of heavy guy wire, I think there are two insulator in each.
5. 2 torque arm guy brackets
6. 2 flat base plates
7. 1 heavy duty hinged base plate
8. 1 tic ring rotor with two motors and controller

So with this you could have a 40 ft tower with a flat top bearing plate on top and a 50 ft tower with a tapered top section. Or one 80 foot tower with a flat plate on top or a 90 foot tower with a tapered top section.

I would like to keep all items as a package together for now.

I also have a M2 Controller for \$500 sold separate or add \$400 to the asking price above with the package.
